Expansion of the charging infrastructure – drivers of electromobility

- Which innovative charging solutions are available?
- Do commercial vehicles require different charging solutions than passenger cars?
- Is the trend of increasing charging power a substitute for larger batteries?
- What are the opportunities and risks for new and established vehicle manufacturers & energy companies?

What to expect

- You will work on a case study in small groups for 8-10 weeks and independently develop solutions for a current topic from the energy industry
- Exclusive strategy case study for students of RWTH Aachen University
- Methods for the analytical processing of case studies
- Learning of presentation techniques and intensive teamwork in small groups
- Contact to experts from the industry as well as the management consultancy FEV Consulting

The exam (4 ECTS points) consists of a presentation in small groups. Attendance at the online/presentation events is mandatory.
